BCA III Semester

Paper Name: Dynamic Web Designing Lab

Lab Exercise Assignment 2 based on PHP Operators & Conditional statement

Faculty Name: Dr. Anupama Jha

Aug 2025

1. Write a PHP script to:

- Take two numbers as input from the user.
- Perform addition, subtraction, multiplication, division, and modulus.
- Display the results in a formatted table.

Expected Output when two variables values are 15 and 4:

Operation	Result
Addition	19
Subtraction	11
Multiplication	60
Division	3.75
Modulus	3

2. Write a PHP program where:

- You initialize a variable \$x = 10.
- Perform the following: \$x += 5, \$x -= 3, \$x *= 2, \$x /= 4.
- Display the value of \$x after each operation.

Expected Output with Initial Value: 10

After += 5: Value is: 15

After -= 3: Value is: 12

After *= 2: Value is: 24

After /= 4: Value is: 6

3. Similarly using PHP, illustrate the use of

- i. Comparison Operator
- ii. Logical Operator

4. Write PHP script to find out whether a number is even or odd.

5. To find out maximum of 3 integers using:

- a) Conditional operator/Ternary operator
- b) Using if...then statement

6. To find whether a number is a prime no or not

7. To check whether the current year is leap or not.

8. To display the day of week using switch statement

9. To display the vowels using switch statement

10. To implement calculator using switch statement
